
1 You ask
2 AI agents gather
3 Plain code checks the money
4 You decide
one repair at a time, at most 5
one sentence
Intake
turns the sentence into city, dates, budget
Research
calls the tools it needs, at most 8 steps, then adds any it missed
Guide
a visit guide for every stop
Composer
picks flight and hotel, times every stop, prices it all
Critic
checks budget, dates, weather and repeats
Checkpoint 2:
you review
Still over budget? You pick: raise it, shorten or drive
Checkpoint 1: asks you when the city, origin or date is missing, unknown or in the past
revise
Feedback
“cheaper” or “skip a place” become edits, the rest stays
or ask for a change
approve
exports a calendar file, books nothing
Tools the agents call, each switching to live data on its own
Google Flights
via SerpApi
Google Hotels
via SerpApi
Google Events
via SerpApi
Ticketmaster
events too
Google Maps

Open-Meteo
weather, no key
OpenRouter runs the language model behind every agent. Any model that can call tools
No keys? Demo mode. The same steps run on rules, all but the visit guides, and tools return labelled sample data. A failed live call falls back the same way.
